SOURCE OF TRUTH

THE PROBLEM

Counselors are drowning in platforms.

Every year brings a new tool, a new login, and another round of professional development — yet the work of identifying which students need help right now still gets done the same way it always has: in a spreadsheet. Traditional dashboards are built for the big picture. But when a counselor needs to know which of their 300 students hasn't met TSI by Thursday, they need something they can filter, sort, and act on immediately. Most tools don't give them that, at least not without extra licenses, training, and logins.

WHO IT'S FOR

Counselors

Prepare for student conversations, identify intervention groups, and track progress week over week.

Campus Principals

Set goals, run data-driven meetings, and coach counselors and advisors using shared, reliable data.

College & Career Advisors

Keep students on their postsecondary pathway with a clear view of who needs what, right now.

District Leaders & Superintendents

Keep students on their postsecondary pathway with a clear view of who needs what, right now.

WHAT'S INSIDE - SIX VIEWS NOW + MORE TO COME

Summary

Campus overview, grade-level detail, TSI college-readiness pathways, EOC performance, and senior college pipeline by group.

All Data

A complete, filterable roster of every student and every CCMR data field in one searchable place.

TSI Met by Assessment

See TSI-met rates by test pathway and identify which students still need support to complete.

Counselor

Compare counselor caseloads side by side and surface the highest-priority students in each cohort.

Advisor

Track advisor cohort performance week over week and flag at-risk students before the deadline.

Grade Level

Understand TSI completion trends across grade levels — seniors first, with younger cohorts coming soon.

Five Future Views

Coming Soon: Dual Credit, IBC/Program of Study, Credentials, Enrollment Pipeline, and Pathform

1 A spreadsheet, on purpose

Campus professionals already live in Excel. The CCMR Weekly Workbook meets them there with no new platform and no new login.

2 No per-user licensing

Share with every counselor, college and career advisor, and administrator on campus at no additional cost per user.

3 Built for weekly action

Every view answers a specific question: Who is on track? Whose caseload needs attention? Where is the biggest opportunity this week?

4 Automatic data, every week

Pulls directly from your district's Regional Data Hub*. No manual exports, no data entry. Always accurate, always current.

*EMC's underlying data infrastructure. Processes student events in real time to power EMC tools automatically.

See It in Action: Real-World Use Cases

How campus teams use the CCMR Weekly Workbook to move from data to student action — every single week.

Counselor

"Which of my 300 students still hasn't met TSI?"

Ms. Rivera opens the Counselor tab, filters to her caseload, and has a sorted list of 23 students who haven't met TSI in under two minutes.

She spends the rest of the morning scheduling conversations — not searching for data.

» 9 students scheduled for TSI support sessions before the end of the week.

Counselor

"I want to walk in knowing exactly where this student stands."

Before her 10am appointment, Ms. Okafor pulls the student's full record from the All Data tab — TSI status, GPA, assessments, pathway, everything in one row.

The conversation is focused, informed, and productive from the first minute.

» Average advising session time down 8 minutes; students report feeling more prepared.

Campus Principal

"I want our Monday meeting to actually change something."

Principal Washington pulls up the Counselor view and projects it for the team.

In 20 minutes, three counselors have identified their highest-priority students, agreed on outreach plans, and set a goal for the following week — all from one shared workbook.

» First data meeting where every counselor left with a specific action list.

College & Career Advisor

"Who is one conversation away from getting back on track?"

Mr. Torres, a district college and career advisor, filters the All Data tab to his cohort and sorts by TSI status.

He finds 7 students who have SAT scores that qualify them for TSI — they just haven't submitted paperwork. He contacts all seven by end of day.

» 5 of 7 students resolved their TSI status within 48 hours.

District Leader

"Which campuses are on track and which need support?"

The district CCMR coordinator reviews weekly summary data across all campuses. Two schools are consistently below average on TSI by Grade Level.

She schedules targeted coaching visits and shares the workbook view directly with those principals.

» Both campuses implemented structured TSI push weeks within the following month.

Team-wide

"Everyone has their own spreadsheet. Nothing matches."

Before the workbook, counselors maintained personal trackers that drifted out of sync. Now the entire campus team — counselors, advisors, and the principal — works from the same data.

Coordination is faster, handoffs are clean, and no student falls through.

» Campus eliminated four separate tracking spreadsheets in the first month of use.
