SOURCE OF TRUTH

THE PROBLEM

Enrollment teams are flying blind.

Managers work across multiple districts, campuses, and student groups simultaneously — yet most have no consistent, current view of where their pipeline stands each week. Teams manually pull reports from multiple platforms, build spreadsheets from raw exports, and check dashboards that show the big picture but not the actionable student lists that move real work forward. Every team has a workaround. None of them scale.

FULL PIPELINE COVERAGE

WHAT'S INSIDE - FOUR VIEWS

Caseload Comparison

Evaluate performance and workload across enrollment managers; identify where to focus and how the team compares as a whole.

District Comparison

Review pipeline performance by feeder district; pinpoint where student momentum is breaking down and which areas need attention.

Campus Comparison

Drill into district data to compare high schools... surface which campuses are contributing to enrollment and where students stall.

Campus Overview

Every student at a feeder campus: who's close, who's at risk, and who may have slipped through the cracks this semester.

WHO IT'S FOR

Enrollment Managers

Know exactly which students to prioritize this week. Walk into campus visits prepared. Filter rosters for targeted outreach in seconds.

Enrollment Leaders

Compare caseload performance at a glance. Identify underperforming districts and campuses. Coach your team with shared, reliable data — not anecdotes.

VPs & College Presidents

Get a real-time, cross-district pipeline picture every week to drive enrollment strategy — no more waiting for end-of-term reports to spot problems.

WHY IT'S DIFFERENT

1

One view, college to student

Most tools give you the big picture or the student list — not both. Navigator connects every level so you can drill from strategy to the student who needs a call this week.

2

No per-user licensing

Share with your entire team. Every enrollment manager and leader gets access — no seat limits, no budget gymnastics required.

3

Built for weekly action

Every view answers a specific operational question. This is a decision tool, not a reporting dashboard — it tells you what to do next.

4

Automatic data, every week

Pulls directly from your district's Regional Data Hub*. No manual exports, no data entry, no stale numbers — your team always has an accurate picture.

*EMC's underlying data infrastructure. Processes student events in real time to power EMC tools automatically.

See It in Action: Real-World Use Cases

How enrollment teams across every role use the Navigator to make better decisions — every single week.

Enrollment Manager

"I have a visit to Lincoln High on Thursday. Who do I talk to?"

Maria filters the Campus Overview to Lincoln High and immediately sees 14 students who applied but haven't registered — and 6 who completed FAFSA but never applied.

She prints two targeted lists and walks in knowing which 20 students to focus on.

» 4 students booked advising appointments on the day of the visit — a first for that campus.

Enrollment Manager

"Who had everything done — and then disappeared?"

James filters for students who completed every step through registration but didn't attend orientation. He has 11 names by 9am.

Six had solvable barriers — childcare, scheduling — that a single call resolved. All six re-enrolled within 72 hours.

» 6 students re-enrolled who would otherwise have been counted as semester losses.

Enrollment Leaders

"Why is our east-side pipeline weaker this year?"

Director Reyes opens the District Comparison tab Monday morning. Riverside Unified has the highest FAFSA completion rate in the region — but the lowest application conversion.

She drills to two campuses dragging the average and reassigns visit rotations that same week.

» Application conversion at those two campuses improved 18 points over six weeks.

VP of Enrollment

"Can we get ahead of our enrollment gap before it's too late?"

The VP opens the Caseload Comparison tab and sees two managers carrying disproportionate loads in high-converting districts while a third is underutilized.

Rebalancing takes one conversation — grounded in shared data everyone trusts.

» Workload rebalanced three weeks earlier than prior years, preventing late-cycle capacity gaps.

College President

"Where do we stand — and where are we headed?"

President Chen spends five minutes reviewing the top-level summary each week: which districts are ahead of last year, which are lagging, and where the biggest opportunity remains.

Board presentations shifted from retrospective reporting to forward-looking strategy.

» Board approved mid-cycle resource reallocation for the first time in five years.

Team-wide

"We're having different conversations about the same students."

Before the Navigator, each manager kept a personal spreadsheet. Handoffs required lengthy context-setting.

Now managers, coordinators, and leadership all work from the same workbook, same source of truth, updated at the same time for everyone.

» New manager onboarding time cut by more than half; coordination errors near zero.
